

SOS

Digital Emergency Alarm System

The SOS Digital Emergency Alarm System is a total solution for either local or remote monitoring of panic buttons giving total peace of mind.

- Monitor hundreds of panic buttons across multiple locations and managed from a central location.
- Ideal for high security locations where a permanent manned security presence is difficult.
- Work alongside CCTV on single screen to provide instant notification of panic button trigger.

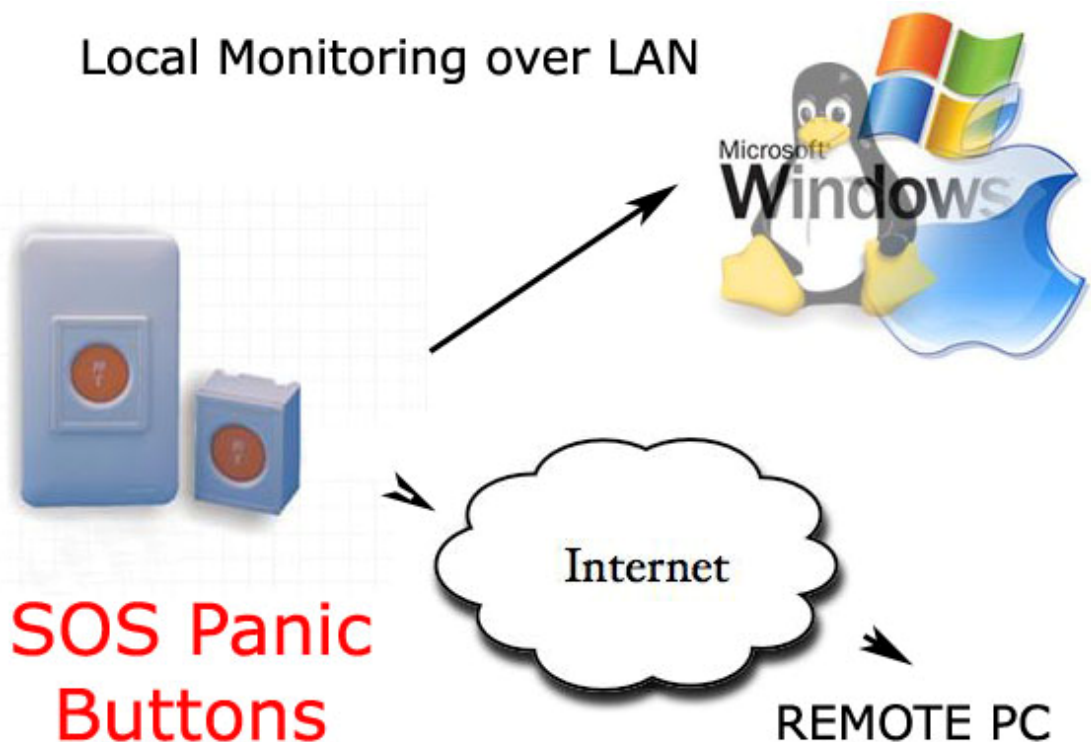

Monitoring of the system takes place via any internet browser as shown below:

1.	Teller 1	3.6.8586	Bank A	192.168.001.178:80	● Ready
2.	Teller 2	3.6.8586	Bank A	192.168.001.150:80	● Ready
3.	Teller 1	3.6.8586	Bank B	192.168.001.151:80	● Ready
4.	Teller 2	3.6.8586	Bank B	192.168.001.152:80	● Ready
5.	Teller 1	3.6.5789	Bank C	192.168.001.101:80	● Ready
6.	Teller 2	3.6.8589	Bank C	192.168.001.120:80	● Ready

Activated panic buttons jump to the top of the list and are shown in red so an operator can see at a glance any buttons that have been triggered.

The main benefit of this system versus a regular panic alarm system is that normal systems operate over a dedicated expensive network. The securemil SOS Emergency Alarm System operates over any internet connection and can be monitored from anywhere in the world. This means a cheap, reliable system that can easily be installed in any location worldwide! Additionally the monitoring software is web based so no client-side software needs to be installed!

Local Monitoring over LAN
